

90-day trial license for CLC Genomics Workbench

Are you the owner of an NGS benchtop sequencer?
Would you like to try CLC Genomics Workbench for 90 days?

Get your benchtop sequencer up to speed

All organizations that own a benchtop sequencer can enter their instrument on benchtopseq.com to register for a 90-day trial license for QIAGEN Bioinformatics' premier desktop software package for analyzing sequencing data, including a large number of analysis, comparison, and visualization tools for genomics, transcriptomics, and epigenomics.

Why is a 90-day evaluation a good idea?

We acknowledge that a regular 14-day evaluation period for CLC Genomics Workbench may not be enough time when you are introducing a new instrument into your workflow. Many researchers don't have the time to test the software thoroughly and with real production mode data.

Having 90 days to evaluate CLC Genomics Workbench allows you to get your analysis pipeline set up, make a serious investigation into your software options, and better determine if CLC Genomics Workbench is a fit for your analysis needs.

Questions and Answers

Q: Who is applicable for this 3 month trial?

A: All owners of benchtop sequencers with an output under 250 GB of data per run are eligible to register for a trial license of 90 days.

Q: How do I get it?

A: Apply via the form available on: www.benchtopseq.com

Q: What information do I need to provide to sign up?

A: Your contact information as stated in the sign up form, (including a valid institutional or academic email address), along with brand, model, and serial number of your instrument for validation. Then you need to send an image of your benchtop sequencer to advxinsidesales@qiagen.com for validation of your machine. Please use the same email, that you used on the sign-up form.

Q: How long will this campaign run?

A: It's not a campaign but a long-term initiative, so there is no end date for this offer.

Q: I have a different next generation sequencing instrument; can I apply for this campaign?

A: Currently, no.

Q: When exactly does the 90-day evaluation period start?

A: Once you've signed up on www.benchtopseq.com, you'll receive an automatic email notification. Within one week, we'll validate the information you've submitted and you'll receive your 90 day trial license that begins the day you receive your trial download information.

Q: When the 90-day license expires, will my data be locked?

A: No. You own your data and it will always be available right where you have saved it. After the license expires, you'll be able to open the CLC Genomics Workbench in limited mode and can always visualize your data and export it. However, to use the analysis tools, you'll need a valid license.

Q: We're multiple organizations sharing one instrument; can we get one 90-day evaluation license per organization?

A: The rule is one license per instrument, so this is not possible.
